Packing for a Holiday Trip

Victoria was packing for a holiday vacation trip with her parents. When packed, her suitcase and clothing weighted 48 pounds together. Victoria’s clothing weighed 5 times as much as her suitcase. How much did her suitcase weigh? How much did her clothing weigh?

Make sure that you indicate how much the suitcase and clothing weighed separately. To receive credit, you must explain what you did, and show any basic math you may have used in determining the solution. **Happy Holidays! Did you know that if more than 23 people gather in a room there is a better than 1 in 2 chance (50%) that at least two of them will share the same birthday?**
