After the Christmas party, there are exactly eight pints of eggnog left in a large punch bowl. The hosts, Will and Yemi, want to split this evenly between them. The punch bowl belongs to Will, who also has an empty, unmarked container that holds exactly three pints. Yemi has an empty, unmarked container that holds exactly five pints.

Explain how these two friends can evenly split the eggnog between them. Remember, their containers are unmarked, so they can't directly measure volume, but they can obviously tell when a container is full.
