Let’s Go Shopping for Gifts!

Attiya and Elvin wanted to buy some presents for their parents. They found the perfect gifts. The store even promised not to charge them any sales tax on the gifts. The two presents together cost $110. One gift was $100 more than the other gift. **How much did each present cost separately?**

Make sure you include an explanation along with your answer. Include any formulas you may have used. This will tell me how you figured the correct answer. **You must give an accurate explanation.** Remember to tell me how much each gift cost by itself. Have fun, and see you next year! Did you know that the average person blinks between 4 to 5 million times a year?
